

### Computer Room Floor Grilles – 600 x 600

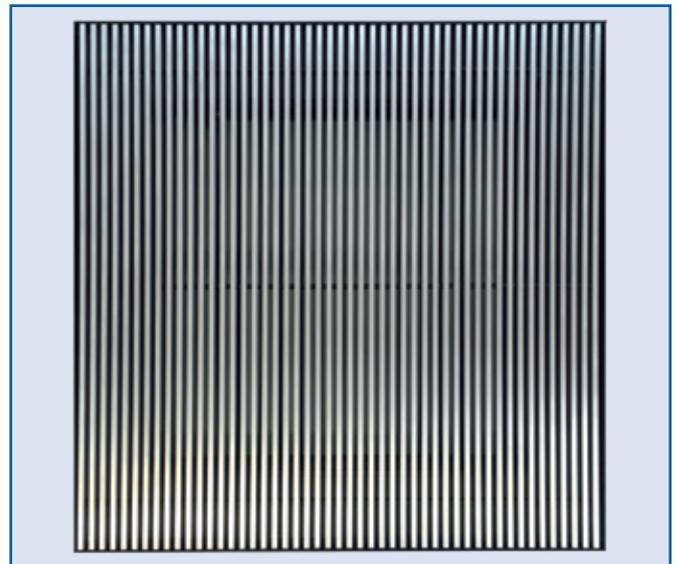

#### Description

The Sill-Line computer room floor grille is designed to fit a standard 600x600 floor tile and is suitable for most raised access floor systems in either a supply or extract function. This floor grille can be supplied with adjustable floor pedestals as shown in the picture above for ease of fitting. Grilles are available fitted with opposed blade dampers (OBD). This allows for control of the airflow via an easy to operate key or screwdriver adjuster. Tested to BS EN 13264:2001.

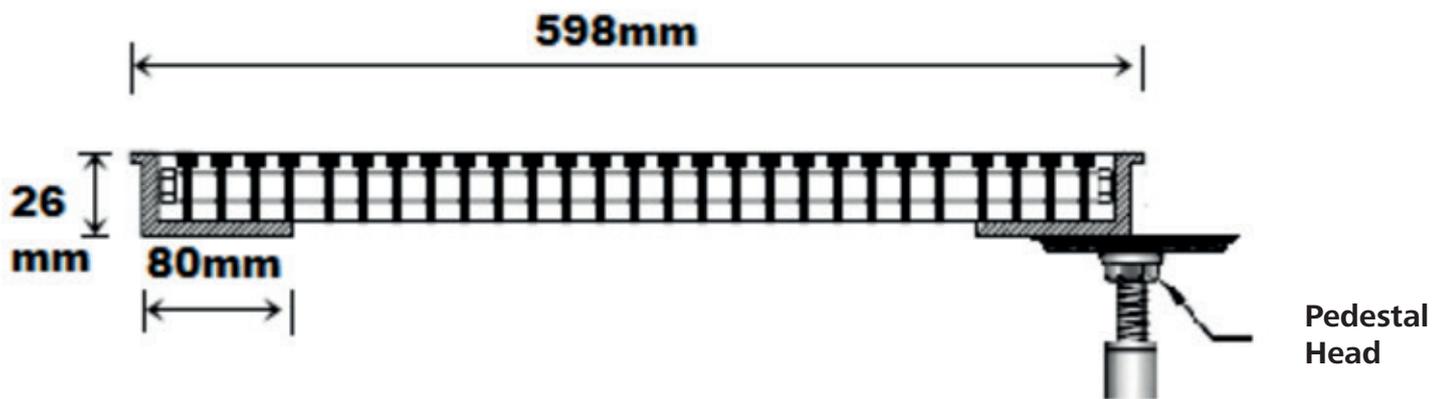

#### Construction

The grille frame is made from 3mm steel finished to black. The grille is constructed from solid aluminium bar anodised to AA15 which is suitable for heavy internal use. It comes in a natural satin finish as shown although other colours are available upon request. There is 50% free area to the grille as standard although this can be altered upon request.

*“following many years in the trench heating market where our grilles have to withstand extreme load pressures, including vehicular access, a natural progression for us was to produce a computer floor grille”*
